Skills matrix software: know who can run every station.

For every skill, see how many trained people you need, how many you have and the gap between them. Every line and every site in one place, not in a spreadsheet per team.

The skills matrix lived in twelve spreadsheets

Every team kept its own file. Before the customer audit someone merged them by hand and found that final test on the night shift had one qualified person. The audit passed. The risk had been sitting there for months, and nobody could see it.

Now you see the gaps before they hurt

Each team keeps its skills matrix in TeamGuru, and everyone reads the same one. For every skill the training status shows where you are short: −1 is a gap to close, ✓ is covered. The training coverage widget in Reports puts every location side by side.

- **Visual gap identification**
- **Training status per skill**
- **Certification expiry tracking**
- **Comparable across sites**

What you get

Visual capability mapping

A single view shows every team member's skill level for every required competency. Green means proficient. Red means gap. The picture is instantly clear.

Skill	MC	JP	AL	TK
CNC setup	4	2	none	3
Weld B	1	4	4	none
Final test	3	3	1	2

Gap identification

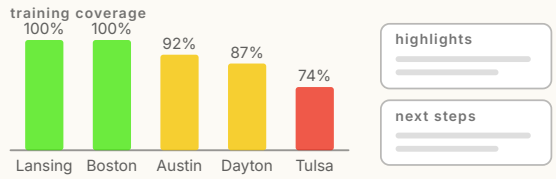

For every skill you set how many trained people you need. The training status shows the difference: −1 is a gap to close, +2 is spare cover.

	CNC setup	Weld B	Final test
required	3	3	2
trained	3	2	4
training status	✓	−1	+2

−1 is a gap to close

Every location on one page

The training coverage widget in Reports shows every site side by side, in red, yellow or green. Drop it into any report, next to your own notes for the monthly update.

Try it with your own skill matrix.
